Modular F.R.L. Units

Modular Design with Uniform Body Style

Better visibility & environmental resistance

The bowl is covered with a transparent bowl guard!

* Body sizes 30 and larger

- The inside is visible from 360°.
- The inner bowl is protected from the environment, allowing for improved safety.

Inner bowl

Material: Polycarbonate

Transparent bowl guard

Material: Polycarbonate

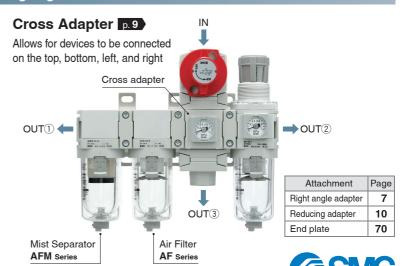

New A right angle square type pressure gauge and various attachments have been added.

Right Angle Square Type Pressure Gauge p.8

Allows for pressure confirmation from the knob side

AC Series

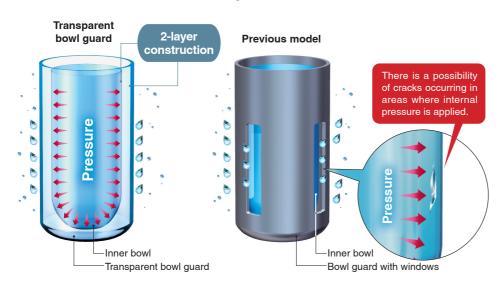

Transparent bowl guard

■ Better environmental resistance: The transparent bowl guard protects the inner bowl!

The bowl guard with windows has been replaced with a polycarbonate transparent bowl guard. Now, even if the environment changes and the bowl is exposed to corrosive chemical or oil splash, the foreign matter will not come into direct contact with the pressurized bowl. This can reduce the risk of bowl breakage.

■ Better visibility: 360°

The transparent bowl guard allows for easy checking of the condensate level inside the filter bowl and the remaining oil amount in the lubricator from any direction.

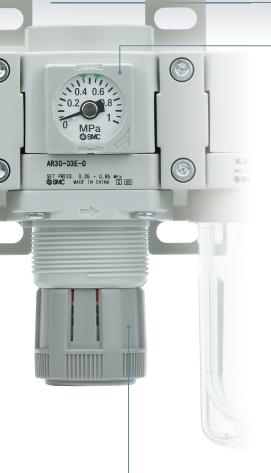

No tools are required.

Easier replacement of the element * AF20-D to AF40-D only

Selection of pressure gauges

(Right angle) Square embedded type pressure gauge

Round type pressure gauge

Digital pressure switch

Open/close type gauge cover

Open the gauge cover.

Open the gauge cover in the direction of the arrow with your fingertips.

Adjust the indicator using a flat blade screwdriver.

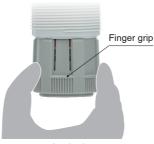

3 Close the gauge cover.

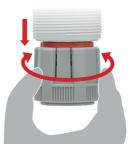

Close the gauge cover in the direction of the arrow and push it in until it clicks in place.

Easy to handle

Easy to hold when unlocked

Locked

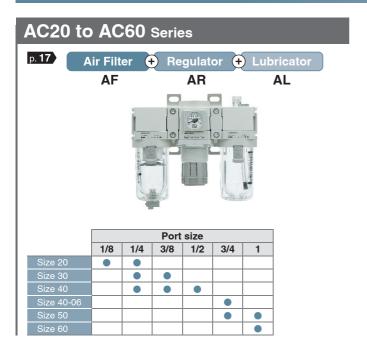

Pressure regulation while unlocked

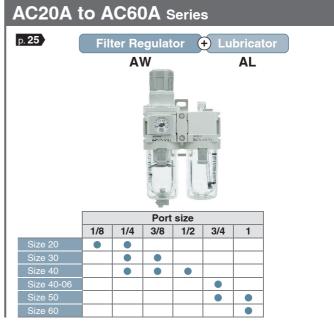

Mounting (Single unit)

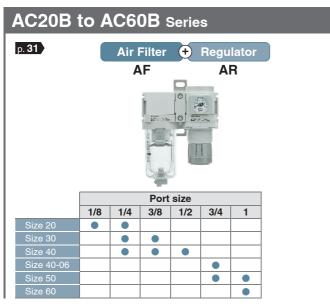

• The mounting pitch for panel mounting is interchangeable between the AR20(K)-D to AR40(K)-06-D and the AR(K)-B series and between the AW20(K)-D to AW40(K)-06-D and the AW(K)-B series. The brackets and set nuts are the same for both existing and new products.

Size conversion is possible Flow capacity UP Extended maintenance cycle

Simple Specials System

A system designed to respond quickly and easily to your special ordering needs

Short lead times

This system enables us to respond to your special needs (additional machining, accessory assembly, or the designing of a modular unit) and deliver your personalized products as quickly as standard products.

Repeat orders

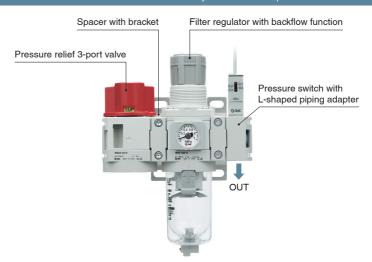

Once we receive a simple special part number from one of your previous orders, we will process the order, manufacture the product, and deliver it to you as quickly as possible.

Please contact your local sales representative for more details.

Examples of Simple Specials

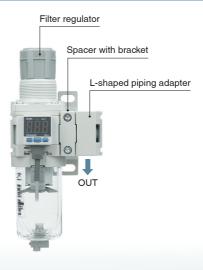

Combination example 1

 * Please contact your local sales representative for ordering procedures.

Combination example 2

 * Please contact your local sales representative for ordering procedures.

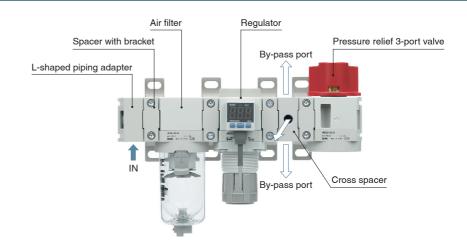

Combination example 3

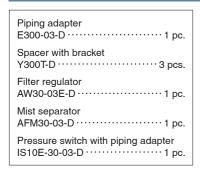

* Please contact your local sales representative for ordering procedures.

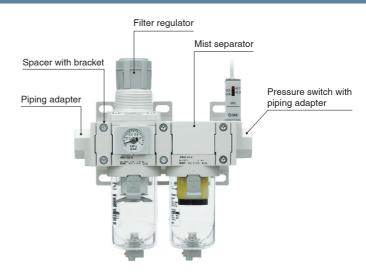

Combination example 4

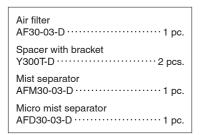

* Please contact your local sales representative for ordering procedures.

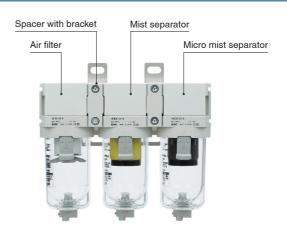

Combination example 5

* Please contact your local sales representative for ordering procedures.

Combination example 6

* Please contact your local sales representative for ordering procedures.

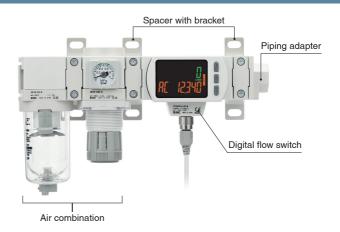

Combination example 7

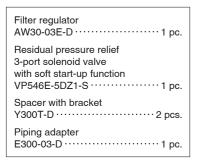

Digital flow switch
PF3A701H-CS-M 1 pc.
Air combination
AC30B-03E-D 1 pc.
Spacer with bracket
Y300T-D 2 pcs.
Piping adapter
E300-03-D 1 pc.

- * Avoid mounting the lubricator on the inlet side.
- * If a pressure relief 3 -port valve is installed on the inlet side of the digital flow switch, causing a backflow of air, the measured value will change.

* Please contact your local sales representative for ordering procedures

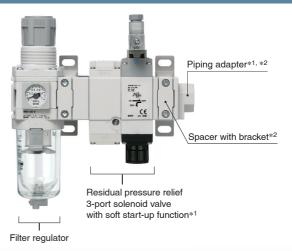

Combination example 8

- *1 Connection threads are not available for the residual pressure relief 3 -port solenoid valve. Select a piping adapter
- *2 Refer to pages 5 7 and 5 9 for details on the spacer with bracket and piping adapter.

* Please contact your local sales representative for ordering procedures.

- *1 Drain guide is NPT1/8 (applicable to the AC20-D) and NPT1/4 (applicable to the AC30-D to AC60-D). The auto drain port comes with a O 3/8" One-touch fitting (applicable to the AC30-D to AC60-D).
- Drain guide is G1/8 (applicable to the AC20-D) and G1/4 (applicable to the AC30-D to AC60-D).
 Options G and M are not assembled and supplied
- loose at the time of shipment.
- When pressure is not applied, condensate which does not start the auto drain mechanism will be left in
- the bowl. Releasing the residual condensate before ending operations for the day is recommended.

 *5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANR)), air leakage from the drain cock may occur during the start of operations. N.C.
- type is recommended. *6 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- Pressure can be set higher than the specification pressure in some cases, but use pressure within the
- specification range.

 *8 Refer to chemical data on pages 83 and 111 for chemical resistance of the bowl
- A bowl guard is provided as standard equipment (polycarbonate).
- A bowl guard is provided as standard equipment (nylon).
- *11 The combination of float type auto drain C and D is not available.
- *12 Without a valve function
- The combination of metal bowl 2 and 8 is not available.

- *14 When choosing with W: Air filter drain port, the drain cock of a lubricator will be with barb fittings.
- For the pipe thread type: NPT
 This product is for overseas use only according to
 - the New Measurement Act. (The SI unit type is provided for use in Japan.)
 Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.
- *16 For options: E1, E2, E3, E4
 This product is for overseas use only according to the New Measurement Act. (The SI unit is provided for use in Japan.)
- *17 O: For the pipe thread type: NPT only *18 \(\triangle : \text{ Select with options: E1, E2, E3, E4.}\)

- *1 Pressure gauge connection threads are not available for F.R.L. unit with a square embedded type pressure gauge or with a digital pressure switch.
- *2 -5 to 50 °C for the products with the digital pressure switch
- For the following conditions in accordance with [Test condition: ISO 8573-4:2001 compliant, Test method ISO 12500-3:2009 compliant] Conditions: When a new element is used, and the flow capacity, inlet pressure, and the amount of solid bodies on the filter inlet side are stable
- *4 The compressed air purity class is indicated based on ISO 8573-1:2010 Compressed air Part 1: Contaminants and purity classes. For details on this standard, refer to page 131.
- *5 The compressed air quality class on the inlet side is [7:4:4].
- The flow rate is 5 drops or greater/min under the following conditions: Inlet pressure of 0.5 MPa; Class 1 turbine oil (ISO VG32); Temperature at 20 °C; Oil adjustment valve fully open. · For a circuit that repeatedly turns ON and OFF on the outlet side, make the adjustment so that the average air consumption per minute becomes the minimum dripping flow rate or more.

<u></u>	auc			+							
6	li-st			_	Unit on product label: MPa, °C, Pressure gauge in SI units: MPa	Г	•	•	•	•	•
	em	ω ₁ ,	Z *15	Unit on product label: psi, °F, Pressure gauge: MPa/psi dual scale		O* ¹⁷					
	0)		ZA *16	Digital pressure switch: With unit selection function		△*18	△*18	△*18	△*18	△*18	

- *1 Drain guide is NPT1/8 (applicable to the AC20A-D) and NPT1/4 (applicable to the AC30A-D to AC60A-D). The auto drain port comes with a Ø 3/8" One-touch fitting (applicable to the AC30A-D to AC60A-D).
- *2 Drain guide is G1/8 (applicable to the AC20A-D) and G1/4 (applicable to the AC30A-D to AC60A-D).
- *3 Options G and M are not assembled and supplied loose at the time of shipment.
- *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANR)), air leakage from the drain cock may occur during the start of operations. N.C. type is recommended.
- *6 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- *7 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
- *8 Refer to chemical data on pages 111 and 129 for chemical resistance of the bowl.
- *9 A bowl guard is provided as standard equipment (polycarbonate).
- *10 A bowl guard is provided as standard equipment (nylon).
- *11 The combination of float type auto drain C and D is not available
- *12 Without a valve function
- *13 The combination of metal bowl 2 and 8 is not available.

- *14 When choosing with W: Filter regulator drain port, the drain cock of a lubricator will be with barb fittings.
- *15 For the pipe thread type: NPT This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.) Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.
- For options: E1, E2, E3, E4 This product is for overseas use only according to the New Measurement Act. (The SI unit is provided for use in Japan.)
- *17 O: For the pipe thread type: NPT only
- *18 △: Select with options: E1, E2, E3, E4.

- *1 Pressure gauge connection threads are not available for F.R.L. unit with a square embedded type pressure gauge or with a digital pressure switch.
- -5 to 50 °C for the products with the digital pressure switch
- *3 For the following conditions in accordance with [Test condition: ISO 8573-4:2001 compliant, Test method ISO 12500-3:2009 compliant] Conditions: When a new element is used, and the flow capacity, inlet pressure, and the amount of solid bodies on the filter inlet side are stable
- *4 The compressed air purity class is indicated based on ISO 8573-1:2010 Compressed air Part 1: Contaminants and purity classes. For details on this standard, refer to page 131.
- *5 The compressed air quality class on the inlet side is [7:4:4].
 *6 The flow rate is 5 drops or greater/min under the following conditions: Inlet pressure of 0.5 MPa; Class 1 turbine oil (ISO VG32); Temperature at 20 °C; Oil adjustment valve fully
 - For a circuit that repeatedly turns ON and OFF on the outlet side, make the adjustment so that the average air consumption per minute becomes the minimum dripping flow rate or more.

	-	h	Flow direction	_	Flow direction: Left to right		•	•	•	•	•
	-standard	h	Flow direction	R	Flow direction: Right to left		•	•	•	•	•
6	tanc			+							
0				_	Unit on product label: MPa, °C, Pressure gauge in SI units: MPa				•		
	Semi	i	Unit	Z *15	Unit on product label: psi, °F, Pressure gauge: MPa/psi dual scale	Г	O* ¹⁷	O*17	O*17	○*17	○*17
	0)			ZA *16	Digital pressure switch: With unit selection function	Γ.	△*18	△*18	△*18	△*18	△*18

- *1 Drain guide is NPT1/8 (applicable to the AC20B-D) and NPT1/4 (applicable to the AC30B-D to AC60B-D). The auto drain port comes with a O 3/8" One-touch fitting (applicable to the AC30B-D to AC60B-D).
- *2 Drain guide is G1/8 (applicable to the AC20B-D) and G1/4 (applicable to the AC30B-D to AC60B-D).
- *3 Options G and M are not assembled and supplied loose at the time of shipment.
- *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANR)), air leakage from the drain cock may occur during the start of operations. N.C. type is recommended.
- *6 When the pressure gauge is attached, a 1.0 MPa

- pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- *7 The regulator is equipped with a backflow function in this configuration. Additionally, when performing maintenance work, make sure that the outlet pressure is released to atmospheric pressure using a pressure gauge.
- *8 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
- *9 Refer to chemical data on page 83 for chemical resistance of the bowl.
- *10 A bowl guard is provided as standard equipment (polycarbonate).
- *11 A bowl guard is provided as standard equipment (nylon).
- *12 The combination of float type auto drain C and D is not available.

- *13 Without a valve function
- *14 The combination of metal bowl 2 and 8 is not available.
- *15 For the pipe thread type: NPT

This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)

Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.

- *16 For options: E1, E2, E3, E4 This product is for overseas use only according to the New Measurement Act. (The SI unit is provided for use in Japan.)
- *17 O: For the pipe thread type: NPT only
- *18 \(\triangle:\) Select with options: E1, E2, E3, E4.

	(0)			ZA *16	Digital pressure switch: With unit selection function	△*18	△*18	△*18

- *1 Drain guide is NPT1/8 (applicable to the AC20C-D) and NPT1/4 (applicable to the AC30C-D to AC40C-D). The auto drain port comes with a O 3/8" One-touch fitting (applicable to the AC30C-D to AC40C-D).
- *2 Drain guide is G1/8 (applicable to the AC20C-D) and G1/4 (applicable to the AC30C-D to AC40C-D).
- *3 Options G and M are not assembled and supplied loose at the time of shipment.
- *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANRI)), air leakage from the drain cock may occur during the start of operations. N.C. type is recommended.
- *6 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- *7 The regulator is equipped with a backflow function in this configuration. Additionally, when performing maintenance work, make sure that the outlet pressure is released to atmospheric pressure using a pressure gauge.
- *8 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
- *9 Refer to chemical data on pages 83 and 91 for chemical resistance of the bowl.
- *10 A bowl guard is provided as standard equipment (polycarbonate).
- *11 Å bowl guard is provided as standard equipment (nylon). *12 The combination of float type auto drain C and D is not available.

- *13 Without a valve function
- *14 The combination of metal bowl 2 and 8 is not available.
- *15 For the pipe thread type: NPT

This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)

Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.

- *16 For options: E1, E2, E3, E4 This product is for overseas use only according to the New Measurement Act. (The SI unit is provided for use in Japan.)
- *17 O: For the pipe thread type: NPT only *18 \(\triangle:\) Select with options: E1, E2, E3, E4.

- *1 Pressure gauge connection threads are not available for F.R.L. unit with a square embedded type pressure gauge or with a digital pressure switch.
- *2 -5 to 50 °C for the products with the digital pressure switch
- *3 Mist separator inlet pressure: 0.7 MPa. Flow at 20 °C, atmospheric pressure, and 65 % of the relative humidity The maximum flow capacity varies depending on the inlet pressure.
- Keep the air flow within the maximum flow capacity to prevent an outflow of lubricant to the outlet side.

 *4 For the following conditions in accordance with [Test condition: ISO 8573-4:2001, Test method ISO 12500-3:2009 compliant] in addition to the conditions above Conditions: When a new element is used, and the flow capacity, inlet pressure, and the amount of solid bodies on the filter inlet side are stable
- *5 The outlet side oil mist concentration for the following conditions in accordance with [Test conditions: ISO 8573-2:2007, Test method ISO 12500-1:2007 compliant] in addition to the conditions above Conditions: When a new element is used, the oil mist concentration on the filter inlet side is 10 mg/m³, and the flow capacity, inlet pressure, and the oil mist concentration on the filter inlet side are stable
- *6 The bowl seal and other O-rings are slightly lubricated.
- *7 The compressed air purity class is indicated based on ISO 8573-1:2010 Compressed air Part 1: Contaminants and purity classes. For details on this standard, refer to page 131.
- *8 The compressed air quality class on the inlet side is [7:4:4].

Air Combination AC20D-D to AC40D-D Series

AC30D-D

						1	
			Symbol	Description		Body size	
					20	30	40
) Indard	ם ס		_	Unit on product label: MPa, °C, Pressure gauge in SI units: MPa	•	•	•
(6) 5	ਲੂ i	Unit	Z *15	Unit on product label: psi, °F, Pressure gauge: MPa/psi dual scale	O*17	O*17	O*17
) imag	= 0 0		ZA *16	Digital pressure switch: With unit selection function	△*18	△*18	△*18

- *1 Drain guide is NPT1/8 (applicable to the AC20D-D) and NPT1/4 (applicable to the AC30D-D to AC40D-D). The auto drain port comes with a O 3/8" One-touch fitting (applicable to the AC30D-D to AC40D-D).
- *2 Drain guide is G1/8 (applicable to the AC20D-D) and G1/4 (applicable to the AC30D-D to AC40D-D).
- *3 Options G and M are not assembled and supplied loose at the time of shipment.
- *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *5 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANR)), air leakage from the drain cock may occur during the start of operations. N.C. type is recommended.
- *6 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- *7 The filter regulator is equipped with a backflow function in this configuration. Additionally, when performing maintenance work, make sure that the outlet pressure is released to atmospheric pressure using a pressure gauge.
- *8 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
- *9 Refer to chemical data on pages 91 and 129 for chemical resistance of the bowl.
- *10 A bowl guard is provided as standard equipment (polycarbonate).
- *11 A bowl guard is provided as standard equipment (nylon).
- *12 The combination of float type auto drain C and D is not available.

- *13 Without a valve function
- *14 The combination of metal bowl 2 and 8 is not available.
 *15 For the pipe thread type: NPT
- This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)
 Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.
- *16 For options: E1, E2, E3, E4 This product is for overseas use only according to the New Measurement Act. (The SI unit is provided for use in Japan.)
- *17 O: For the pipe thread type: NPT only
- *18 A: Select with options: E1, E2, E3, E4.

- *1 Pressure gauge connection threads are not available for F.R.L. unit with a square embedded type pressure gauge or with a digital pressure switch.
- *2 -5 to 50 °C for the products with the digital pressure switch
- *3 Mist separator inlet pressure: 0.7 MPa. Flow at 20 °C, atmospheric pressure, and 65 % of the relative humidity. The maximum flow capacity varies depending on the inlet pressure.
- Keep the air flow within the maximum flow capacity to prevent an outflow of lubricant to the outlet side.

 *4 For the following conditions in accordance with [Test condition: ISO 8573-4:2001, Test method ISO 12500-3:2009 compliant] in addition to the conditions above Conditions: When a new element is used, and the flow capacity, inlet pressure, and the amount of solid bodies on the filter inlet side are stable
- *5 The outlet side oil mist concentration for the following conditions in accordance with [Test condition: ISO 8573-2:2007, Test method ISO 12500-1:2007 compliant] in addition to the conditions above
- the conditions above

 Conditions: When a new element is used, the oil mist concentration on the filter inlet side is 10 mg/m³, and the flow capacity, inlet pressure, and the oil mist concentration on the filter inlet side are stable
- *6 The bowl seal and other O-rings are slightly lubricated
- *7 The compressed air purity class is indicated based on ISO 8573-1:2010 Compressed air Part 1: Contaminants and purity classes. For details on this standard, refer to page 131.
- *8 The compressed air quality class on the inlet side is [7:4:4].

^{*1 ☐} in part numbers for a round type pressure gauge indicates a pipe thread type. No indication is necessary for R; however, indicate N for NPT. Please contact SMC regarding the connection thread NPT and pressure gauge supply for psi unit specifications.

^{*6} Separate spacers are required for modular units.

^{*2} Including one O-ring and 2 mounting screws

^{*3} Lead wire with connector (2 m), adapter, lock pin, O-ring (1 pc.), mounting screws (2 pcs.) are attached. []: Switch body only Regarding how to order the digital pressure switch, refer to page 130.

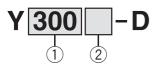

^{*4} Minimum operating pressure: N.O. type- 0 . 1 MPa; N.C. type- 0 . 1 MPa (AD27-D) and 0.15 MPa (AD37-D/AD47-D). Please contact SMC separately for psi and °F unit display specifications.

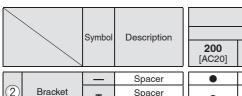

^{∗5 ☐} in attachment part numbers indicates a pipe thread type. No indication is necessary for Rc thread; however, indicate N for NPT thread, and F for G thread

Centre of

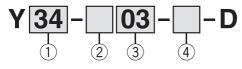

F.R.L. body

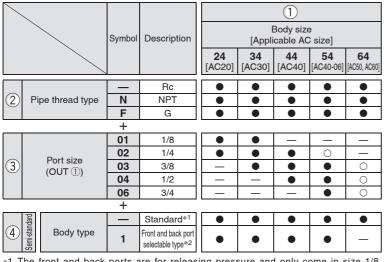

- · Pipe threads are not provided on the face which connects with the other components. For use, a separate spacer (or spacer with bracket) is required.
- · The backflow of oil may occur when a spacer is used on the inlet side of the lubricator. Attach a check valve between the lubricator and the product to prevent backflow.
- · When the slim body type is to be mounted to a wall using a spacer with bracket, use a spacer on only one side.

AC-D Series

Cross Spacer: 1/8, 1/4, 3/8, 1/2, 3/4

· The piping can be branched upward/downward (OUT ①) or forward/backward (OUT ②).

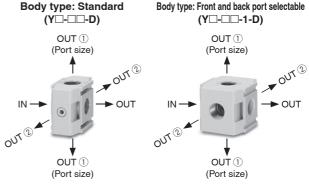

- *1 The front and back ports are for releasing pressure and only come in size 1/8, irrespective of the ③ port size. The minimum port size is 1.4 mm.
- *2 The front and back ports come in the same size as the $\ensuremath{\Im}$ port size.
- *3 "O" indicates that only the standard body type is applicable.

[·] Pipe threads are not provided on the face which connects with the other components. For use, a separate spacer (or spacer with bracket) is required.

AC-D Series Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

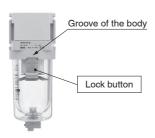

Air Supply

⚠ Caution

Mounting / Adjustment

⚠ Caution

1. When the bowl is installed on the air filter, filter regulator, lubricator, mist separator, or micro mist separator (AC30-D to AC60-D), install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

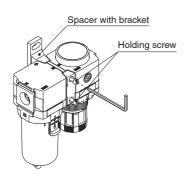

Tighten the 2 holding screws on the spacer with bracket or spacer evenly.

Tighten them to the recommended tightening torque. Insufficient tightening torque may result in loosening or sealing failure. Excessive tightening torque may damage the thread, etc.

Recommended Torque

Unit: N·m

Torque	0.36 ±0.036	1.2 ±0.05	1.2 ±0.05	1.4 ±0.05	2.0 ±0.1			

Selection

⚠ Warning

1. Piping load and moment

Avoid any torsional or bending moments other than those caused by the equipment's own weight as failure to do so may result in damage.

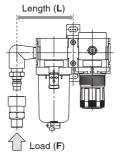

Support external piping separately. If moment application is unavoidable during operation, the moment should be lower than the max. moment shown below.

Piping materials without flexibility, such as steel tube piping, are prone to being affected by excess moment loads or vibrations from the piping side. Use flexible tubing in between to avoid such effects.

Unit: N·m

Applicable model	AC20□	AC30□	AC40□	AC40□-06	AC50□ AC60□
Max. moment (M)	14.5	16	19.5	35	45

Max. moment (M) = Length (L) x Load (F)

2. Float type auto drain

Operate under the following conditions to avoid a malfunction. <N.O. type>

Operating compressor: 0.75 kW (100 l/min (ANR)) or more
When using 2 or more auto drains, multiply the value above by
the number of auto drains to find the capacity of the compressors
you will need.

For example, when using 2 auto drains, 1.5 kW (200 l/min (ANR)) of the compressor capacity is required.

- Operating pressure: 0.1 MPa or more
 N.C. times:
- <N.C. type>
- Operating pressure for AD27-D: 0.1 MPa or more
 Operating pressure for AD37-D/AD47-D: 0.15 MPa or more
- 3. Use a regulator or filter regulator with backflow function when mounting a pressure relief 3-port valve on the inlet side to ensure the release of the residual pressure. Otherwise, residual pressure will not be fully released.

⚠ Caution

- 1. When releasing air at the intermediate position using a T-spacer on the inlet side of the lubricator, lubricant may backflow. Therefore, releasing air that does not contain traces of lubricant is not possible. To release air that does not contain traces of lubricant, use a check valve (AKM series) on the inlet side of the lubricator to prevent a backflow of the lubricant.
- 2. If a pressure relief 3-port valve is mounted on the inlet side of the lubricator, causing a backflow of air, it can result in a backflow of oil or damage to internal parts. Do not use it in this manner.
- 3. An F.R.L. unit shipped from the plant has its model number labeled. However, components that are combined together during the distribution process do not have a label on them.
- 4. When operating at an inlet pressure lower than the inlet pressure used in the flow rate characteristics graph, the pressure drop on the outlet side may be greater. Therefore, be sure to conduct testing using the actual equipment.

For air combination selection, refer to the "Product Selection Guide."

- *1 Option B is included in the package with the product but does not come assembled. The assembly consists of 2 types of the bracket and 2 mounting screws.

 *2 The auto drain port is O 10 One-touch fitting (② Pipe thread type: Rc, G) or O 3/8" One-touch fitting (② Pipe thread type: NPT)
- *3 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *4 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANR)), air leakage from the drain cock may occur during the start of operations. N.C. type is recommended.
- *5 Refer to chemical data on page 83 for chemical resistance of the bowl.
- *6 A bowl guard is provided as standard equipment (polycarbonate).
- *7 A bowl guard is provided as standard equipment (nylon).
- *8 The combination of float type auto drain C and D is not available
- *9 Without a valve function. The mounting screws are the same as the thread of ②.
- *10 The combination of metal bowl 2 and 8 is not available.
- *11 For the pipe thread type: NPT. This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)
- *12 Excludes port size "06"
- *13 O: For the pipe thread type: NPT only
- *14 A special body type is required to mount the element service indicator. It cannot be mounted on a standard body.

^{*2} The compressed air purity class is indicated based on ISO 8573-1:2010 Compressed air - Part 1: Contaminants and purity classes.

For details on this standard, refer to page 131. *3 The compressed air quality class on the inlet side is [7:9:4].

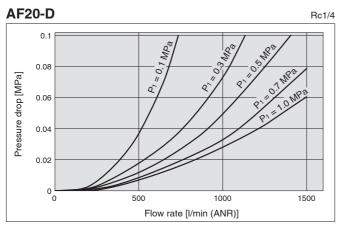

[□] in bowl assembly part numbers indicates a pipe thread type (applicable tubing for auto drain).

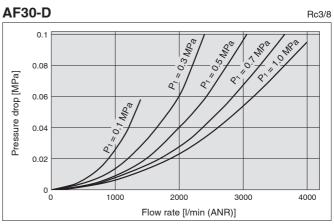

No indication is necessary for Rc thread; however, indicate N for NPT thread, and F for G thread. (For auto drain, —: O 10, N: O 3/8") Please contact SMC separately for psi and °F unit display specifications.

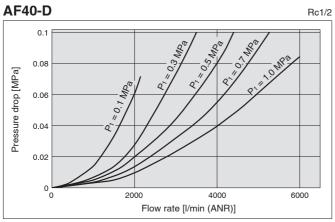

^{*2} Please contact SMC separately for psi and °F unit display specifications.

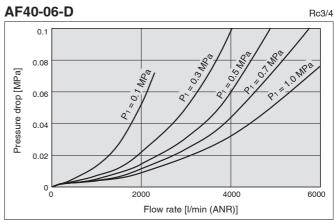

Air Filter AF20-D to AF60-D Series

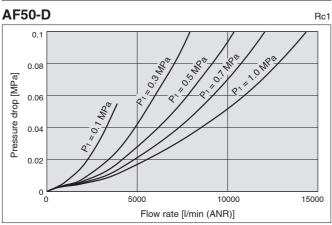

Flow Rate Characteristics (Representative values)

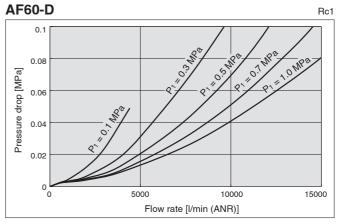

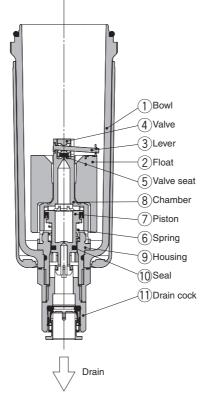

AF20-D to AF60-D Series

Working Principle: Float Type Auto Drain

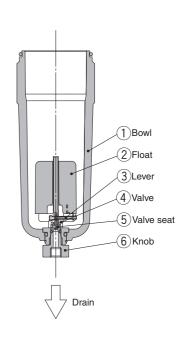

N.O. type: AD38-D, AD48-D

1 Bowl 4 Valve 3 Lever 2 Float 5 Valve seat 8 Chamber 6 Spring 7 Piston 9 Housing 10 Seal 11 Drain cock

N.C. type: AD37-D, AD47-D

Compact auto drain N.C. type: AD27-D

When pressure inside the bowl is released:

When pressure is released from the bowl \bigcirc , the piston \bigcirc is lowered by the spring \bigcirc .

The sealing action of the seal 10 is interrupted, and the outside air flows inside the bowl 1 through the housing hole 9 and the drain cock 11

Therefore, if there is an accumulation of condensate in the bowl 1, it will drain out through the drain cock.

When pressure is applied inside the bowl:

When pressure is 0.1 MPa or more, the force of the piston ⑦ surpasses the force of the spring ⑥, and the piston goes up.

This pushes seal @ up so that it creates a seal, and the inside of the bowl ①, is shut off from the outside air.

If there is no accumulation of condensate in the bowl $\widehat{\ \ }$ at this time, the float $\widehat{\ \ }$ will be pulled down by its own weight, causing the valve $\widehat{\ \ }$, which is connected to the lever $\widehat{\ \ }$, to seal the valve seat $\widehat{\ \ }$.

When there is an accumulation of condensate in the bowl:

The float ② rises due to its own buoyancy and the seal at the valve seat ⑤ is interrupted.

This allows the pressure inside the bowl ① to enter the chamber ⑧. The result is that the combined pressure inside the chamber ⑧ and the force of the spring ⑥ lowers the piston ⑦.

This causes the sealing action of the seal 10 to be interrupted, and the accumulated condensate in the bowl 1 drains out through the drain cock 11.

Turning the drain cock ① manually counterclockwise lowers the piston ②, and causes the seal created by the seal ⑩ to be interrupted, thus allowing the condensate to drain out.

When pressure inside the bowl is released:

Even when pressure inside the bowl ① is released, spring ⑥ keeps the piston ⑦ in its upward position.

This keeps the seal created by the seal 1 in place; thus, the inside of the bowl 1 is shut off from the outside air.

Therefore, even if there is an accumulation of condensate in the bowl 1, it will not drain out.

When pressure is applied inside the bowl:

Even when pressure is applied inside the bowl ①, the combined force of the spring ⑥ and the pressure inside the bowl ① keeps the piston ⑦ in its upward position.

This maintains the seal created by the seal 1 in place; thus, the inside of the bowl 1 is shut off from the outside air.

If there is no accumulation of condensate in the bowl ① at this time, the float ② will be pulled down by its own weight, causing the valve ④, which is connected to the lever ③, to seal the valve seat ⑤.

When there is an accumulation of condensate in the bowl:

The float ② rises due to its own buoyancy and the seal at the valve seat ⑤ is interrupted. This allows the pressure inside the bowl ① to enter the chamber ⑧.

The result is that the pressure inside the chamber ® surpasses the force of the spring ® and pushes the piston ⑦ downward.

This causes the sealing action of the seal 10 to be interrupted and the accumulated condensate in the bowl 10 drains out through the drain cock 10. Turning the drain cock 11 manually counterclockwise lowers the piston 27, and causes the seal created by the seal 10 to be interrupted, thus allowing the condensate to drain out.

When pressure inside the bowl is released:

Even when pressure inside the bowl $\widehat{\ }$ is released, the weight of the float $\widehat{\ }$ causes the valve $\widehat{\ }$, which is connected to the lever $\widehat{\ }$, to seal the valve seat $\widehat{\ }$. As a result, the inside of the bowl $\widehat{\ }$ is shut off from the outside air.

Therefore, even if there is an accumulation of condensate in the bowl ①, it will not drain out.

When pressure is applied inside the howl:

Even when pressure is applied inside the bowl ①, the weight of the float ② and the differential pressure that is applied to the valve ④ cause the valve ④ to seal the valve seat ⑤, and the outside air is shut off from the inside of the bowl ①

When there is an accumulation of condensate in the bowl:

The float ② rises due to its own buoyancy and the seal at the valve seat ⑤ is interrupted.

The condensate inside the bowl ① drains out through the knob ⑥.

Turning the knob ⑥ manually counterclockwise lowers it and causes the sealing action of the valve seat ⑤ to be interrupted, which allows the condensate to drain out.

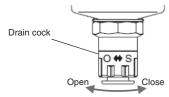

Air Filter AF20-D to AF60-D Series

Operating State and Proper Use of Float Type Auto Drain

Auto drain	When pressure is not applied	When pressu	ure is applied	Minimum operating
Auto drain	(After exhausting residual pressure)	Before condensate accumulates	When condensate accumulates	pressure
	Condensate discharged (Open)	Condensate not discharged (Close)	Condensate discharged (Open)	
N.O. Normally open	Float Piston Orifice			0.1 MPa or more AF30-D to AF60-D
N.C. Normally closed	Condensate not discharged (Close) Float Piston Orifice			0.1 MPa or more AF20-D 0.15 MPa or more AF30-D to AF60-D

♦ For both N.O. and N.C., the condensate can be discharged manually by turning the drain cock to the "O" position.

		Proper Use		Recommended
Compresso	or	When pressure is not applied (After exhausting residual pressure)	Cold climates	auto drain
0.75 kW or m	ore	Condensate not accumulated Do not want to accumulate condensate generated at the inlet side when pressure is not applied.	Want to prevent troubles caused by freezing.	N.O.* ¹ Normally open
Less than 0.75	kW	Condensate accumulated		N.C. Normally closed

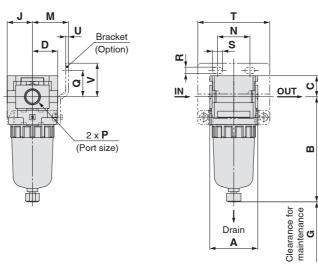

^{*1} For N.O. (Normally open) type, the condensate discharge passage is open when pressure is not applied. For this reason, the drain port is not closed completely in a compressor with a small supply amount (less than 0.75 kW) and the air will ceaselessly blow out.

3 Copper, Fluorine and Silicone-free + Low Particle Generation

For details, refer to the Clean Series/Low Particle Generation section of the Web Catalogue.

21 - Standard model no.

Copper, fluorine and silicone-free + Low particle generation

AF-D Series Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Design / Selection

Marning

 The bowl material of the standard air filter is polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Chemical resistance of polycarbonate or nylon bowl

			Mat	erial
Туре	Chemical name	Application examples	Polycar- bonate	Nylon
Acid	Hydrochloric acid Sulfuric acid Phosphoric acid Chromic acid	Acid washing liquid for metals	Δ	×
Alkaline	Sodium hydroxide (Caustic soda) Potash Calcium hydroxide (Slack lime) Ammonia water Sodium carbonate	Degreasing of metals Industrial salts Water-soluble cutting oil	×	0
Inorganic salts	Sodium sulfide Potassium nitrate Sodium sulfate	_	X	Δ
Chlorine solvents	Carbon tetrachloride Chloroform Ethylene chloride Methylene chloride	Cleansing liquid for metals Printing ink Dilution	X	Δ
Aromatic series	Benzene Toluene Paint thinner	Coatings Dry cleaning	×	Δ
Ketone	Acetone Methyl ethyl ketone Cyclohexane	Photographic film Dry cleaning Textile industries	×	X
Alcohol	Ethyl alcohol IPA Methyl alcohol	Antifreeze Adhesives	Δ	×
Oil	Gasoline Kerosene	_	×	0
Ester	Phthalic acid dimethyl Phthalic acid diethyl Acetic acid	Synthetic oil Anti-rust additives	×	0
Ether	Methyl ether Ethyl ether	Brake oil additives	×	0
Amino	Methyl amino	Cutting oil Brake oil additives Rubber accelerator	×	С
Others	Thread-lock fluid Seawater Leak tester	_	×	Δ
O: Essential	ly safe △: Some effect	cts may occur. X: Effe	cts will o	ccur.

- * When the above factors are present, or there is some doubt, use a metal bowl for safety.
- * The display window material for the semi-standard type with an element service indicator is nylon.

Maintenance

Marning

 Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

Mounting / Adjustment

/ Caution

 When the bowl is installed on the air filter (AF30-D to AF60-D), install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl

Handling

∧ Caution

- 1. The element service indicator (Semi-standard: L) is used to check the pressure differential between the IN and OUT sides. When operating at a flow rate with a pressure differential exceeding 0.025 MPa, the element service indicator may operate even when the element is in its initial state.
- 2. For models with an element service indicator, adjust the flow rate in the direction that increases the flow rate.
 If the designated flow rate is exceeded, reset the flow rate to zero and readjust it until the designated flow rate is reached.
- 3. For models with an element service indicator, as the element becomes more clogged, the indicator will display an increasing level of red. Be sure to replace the element before the level of red reaches the top of the indicator.

- *5 Without a valve function. The mounting screws are the same as the thread of ②.
- *6 The combination of metal bowl 2 is not available.
- *7 For the pipe thread type: NPT. This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)
- *8 \bigcirc : For the pipe thread type: NPT only

Mist Separator/*AFM20-D to AFM40-06-D*Micro Mist Separator/*AFD20-D to AFD40-06-D*

Made to Order

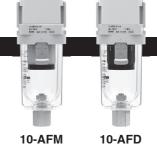

Please contact SMC for detailed dimensions, specifications, and lead times.

2 Clean Series

For details, refer to the Clean Series/Low Particle Generation section of the Web Catalogue.

3 Copper, Fluorine and Silicone-free + Low Particle Generation

For details, refer to the Clean Series/Low Particle Generation section of the Web Catalogue.

21 - Standard model no.

Copper, Fluorine and Silicone-free + Low Particle Generation

AFM-D/AFD-D Series Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Design / Selection

⚠ Warning

1. The bowl material of the standard mist separator and micro mist separator is polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Chemical resistance of polycarbonate or nylon bowl

- When the above factors are present, or there is some doubt, use a metal bowl for safety.
- * The display window material for the semi-standard type with an element service indicator is nylon.

Air Supply

⚠ Caution

- 1. Install an air filter (AF series) as a pre-filter on the inlet side of the mist separator to prevent premature clogging.
- 2. Install a mist separator (AFM series) as a pre-filter on the inlet side of the micro mist separator to prevent premature clogging.
- **3.** Do not install on the inlet side of the dryer as this can cause premature clogging of the element.

Maintenance

Marning

 Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element

Mounting / Adjustment

⚠ Caution

 When the bowl is installed on the mist separator (AFM30-D/AFM40-D), or micro mist separator (AFD30-D/AFD40-D), install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

Design

1. Design the system so that the mist separator or micro mist separator is installed in a pulsation-free location. The difference between internal and external pressure inside the element should be kept within 0.1 MPa, as exceeding this value could cause damage.

Selection

⚠ Caution

- 1. Do not allow air flow that exceeds the rated flow. If the air flow is allowed outside the range of the rated flow even momentarily, drainage and lubricant may splash at the outlet side or cause damage to the component.
- 2. Do not use in a low pressure application (such as a blower). An F.R.L. unit has its own minimum operating pressure depending on the equipment and is designed specifically to function with compressed air. If used below the minimum operating pressure, a loss of performance and malfunction can occur. Please contact SMC if an application under such conditions cannot be avoided.

Handling

∧ Caution

- 1. The element service indicator (Semi-standard: L) is used to check the pressure differential between the IN and OUT sides. When operating at a flow rate with a pressure differential exceeding 0.025 MPa, the element service indicator may operate even when the element is in its initial state.
- 2. For models with an element service indicator, adjust the flow rate in the direction that increases the flow rate.
 If the designated flow rate is exceeded, reset the flow rate to zero and readjust it until the designated flow rate is reached.
- 3. For models with an element service indicator, as the element becomes more clogged, the indicator will display an increasing level of red. Be sure to replace the element before the level of red reaches the top of the indicator.

Modular Type Regulator AR Series

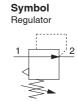

Regulator AR Series	Model	Port size	Set pressure	Options
	AR20(K)-D	1/8, 1/4		Bracket Set nut
STATE OF THE PARTY	AR30(K)-D	1/4, 3/8		(for panel mount) Square embedded type pressure gauge

	AR50(K)-D 3/4, 1		Bracket Square embedded type pressure gauge	
p. 93 to 103	AR60(K)-D	1		Digital pressure switch Round type pressure gauge

Regulator

AR20-D to AR60-D **Regulator with Backflow Function**

AR20K-D to AR60K-D

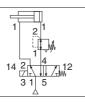

Regulator with Backflow **Function**

· Models with the backflow function include a mechanism which allows for the air pressure in the outlet side to be released to the inlet side.

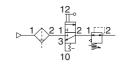

Example 1)

When the pressure in the rear and the front of the cylinder differs:

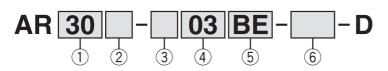

Example 2)

When the air supply is cut off and releasing the inlet pressure to the atmosphere, the residual pressure release of the outlet side can be ensured for a safety purpose.

How to Order

Option and Semi-standard Symbol Selection

- Select one each for a to g.
- When more than one specification is required, indicate
- in alphanumeric order.

Example) AR30K-F03BE-1NR-D

- *1 Set the inlet pressure to at least 0.05 MPa higher than the set pressure.
- *2 Options B, G, H, and M are not assembled and supplied loose at the time of shipment.
- *3 The assembly consists of a bracket and set nuts (applicable to the AR20(K)-D to AR40(K)-D). For the AR50(K)-D and AR60(K)-D, the assembly consists of 2 types of the bracket and 2 mounting screws.
- *4 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- *5 Cannot be selected for the type with a set nut (option "H")
- *6 The direction the pressure gauge scale plate faces is from the knob side.
- *7 When choosing with H (panel mount), the installation space for lead wires will not be secured. In this case, select "wiring top entry" for the electrical entry. (Select "wiring bottom entry" when the semi-standard Y is chosen simultaneously.)
- *8 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
- *9 For the pipe thread type: NPT
 This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.) Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.
- *10 For options: E1, E2, E3, E4
 - This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)
- *11 O: For the pipe thread type: NPT only
- *12 \(\triangle\): Select with options: E1, E2, E3, E4.

- *1 The assembly consists of a bracket and set nuts. For the AR50(K)-D and AR60(K)-D, the assembly consists of a bracket A/B and 2 mounting screws.
- *2 Please contact SMC regarding the set nuts for the AR50(K)-D and AR60(K)-D.
- *3 ☐ in part numbers for a round pressure gauge indicates a pipe thread type. No indication is necessary for R; however, indicate N for NPT. Please contact SMC regarding the pressure gauge supply for both MPa and psi unit specifications.
 *4 Including one O-ring and 2 mounting screws. []: Pressure gauge cover only
- *5 The right angle square type pressure gauge only includes the pressure gauge body. The pressure gauge body comes with 1 O-ring and 2 mounting screws.
- In addition, the part number in brackets includes a pressure gauge with a right angle adapter as well as an adapter, lock pin, 1 O-ring, and 2 mounting screws. *6 In addition to the pressure switch body, lead wire with connector (2 m), adapter, lock pin, O-ring (1 pc.), mounting screws (2 pcs.) are attached.
- []: Switch body only (For the digital pressure switch specifications, refer to page 130.)

^{*1} The dimension of B is the length when the regulator knob is unlocked.

Regulator/AR20-D to AR60-D Regulator with Backflow Function/AR20K-D to AR60K-D

Made to Order

Please contact SMC for detailed dimensions, specifications, and lead times.

10.4 MPa Setting

The setting specification is 0.4 MPa. When a pressure gauge is included, the display will show a range from 0 to 0.7 MPa.

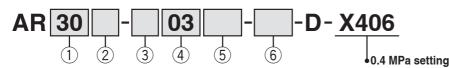

Specifications

Made-to-order part no.	-X406
Proof pressure [MPa]	1.5
Max. operating pressure [MPa]	1.0
Set pressure range [MPa]*1	0.05 to 0.4

^{*1} Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.

Applicable Models

Model	AR20(K)-D	AR30(K)-D	AR40(K)-D	AR40(K)-06-D	AR50(K)-D	AR60(K)-D

- *1 Set the inlet pressure to at least 0.05 MPa higher than the set pressure.
- *2 Options B, G, H, and M are not assembled and supplied loose at the time of shipment.
- *3 The assembly consists of a bracket and set nuts (applicable to the AR20(K)-D to AR40(K)-D). The AR50(K)-D and AR60(K)-D assemblies include 2 types of brackets and 2
 - The AR50(K)-D and AR60(K)-D assemblies include 2 types of brackets and 2 mounting screws.
- *4 A 0.7 MPa pressure gauge will be fitted.
- *5 Cannot be selected for the type with a set nut (option "H")
- *6 The direction the pressure gauge scale plate faces is from the knob side.
- *7 When choosing with H (panel mount), the installation space for lead wires will not be secured. In this case, select "wiring top entry" for the electrical entry. (Select "wiring bottom entry" when the semi-standard Y is chosen simultaneously.)
- *8 For the pipe thread type: NPT
 This product is for overseas use only according to the New Measurement Act. (The SI unit
 type is provided for use in Japan.) Cannot be used with M: Round type pressure gauge
 (with colour zone). Available by request for special. The digital pressure switch will be
 equipped with the unit selection function, setting to psi initially.
- *9 For options: E1, E2, E3, E4. This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)
- *10 O: For the pipe thread type: NPT only
- *11 △: Select with options: E1, E2, E3, E4.

Standard model no.

Copper, Fluorine and Silicone-free + Low Particle Generation

AR(K)-D Series Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Design / Selection

 Residual pressure disposal (outlet pressure removal) is not possible for the AR20-D to AR60-D even though the inlet pressure is exhausted. When the residual pressure disposal is performed, use the regulator with a backflow function (AR20K-D to AR60K-D).

⚠ Caution

1. When operating at an inlet pressure lower than the inlet pressure used in the flow rate characteristics graph, the pressure drop on the outlet side may be greater. Therefore, be sure to conduct testing using the actual equipment.

For pressure control equipment selection, refer to the "Product Selection Guide."

Maintenance

⚠ Warning

 When using the regulator with backflow function between a solenoid valve and an actuator, check the pressure gauge periodically. Sudden pressure fluctuations may shorten the durability of the pressure gauge. A digital pressure gauge is recommended for such situation or as deemed necessary.

Mounting / Adjustment

⚠ Warning

- 1. Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator knob excessively can cause damage to the internal parts.
- **2.** Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.
- Before replacing or changing the mounting direction of the pressure gauge, or changing the direction of the scale plate, be sure to release the inlet and outlet pressure completely.

It is dangerous to replace or change the mounting direction of the pressure gauge, or change the direction of the scale plate, while it is under pressure.

⚠ Caution

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.
 - Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
 - Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).

Piping

Marning

1. To screw the pressure gauge and piping materials into the pressure gauge port on the product, tighten to the recommended torque (3 to 5 N·m) while securely holding the AR(K)-D in place. Additionally, when mounting a One-touch fitting to the pressure gauge port, refer to the Fittings and Tubing Precautions.

AL-D Series Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Design / Selection

- **1.** Do not introduce air from the outlet side as this can damage the damper.
- The standard bowl and sight dome of the lubricator is polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Chemical resistance of polycarbonate bowl with sight dome and nylon bowl with sight dome

Type	Chemical name	Application examples	Mate	
i ype	Griernicai naine	Application examples	Polycarbonate	Nylon

When the above factors are present, or there is some doubt, use a metal bowl for safety.

Design / Selection

⚠ Caution

1. When the piping is branched on the inlet side, install a check valve to prevent the lubricant from back flowing.

Maintenance

Marning

- For the AL20-D, replenish the lubricant after releasing the inlet pressure. Lubrication cannot take place under a pressurized condition.
- Tighten the lubrication plug to the recommended tightening torque. Insufficient tightening torque may cause loosening or defective sealing. Excessive tightening torque may damage the thread, etc.

Recommended Torque

Unit: N⋅m

Model	AL20-D	AL30-D	AL40-D AL40-06-D AL50-D AL60-D
Torque	0.25 to 0.35	0.35 to 0.45	0.5 to 0.6

3. Adjustment of the oil regulating valve (sight dome assembly) for models from the AL20-D to AL60-D should be carried out manually. Turning it counterclockwise increases the dripping amount, and turning it clockwise reduces the dripping amount. The use of tools can result in damage to the unit. From the fully closed position, three rotations will bring it to the fully open position. Do not rotate it any further than this. Note that the numbered scale markings are guidelines for adjusting the position, and not indicators of the dripping amount.

Mounting / Adjustment

↑ Caution

 When the lubricator bowl is installed on the AL30-D to AL60-D, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

Symbol

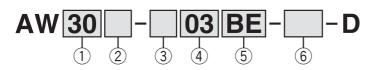

- · Integrated filter and regulator units save space and require less piping.
- Models with the backflow function include a mechanism which allows for the air pressure in the outlet side to be released to the inlet side.

Example)

When the air supply is cut off and releasing the inlet pressure to the atmosphere, the residual pressure release of the outlet side can be ensured for a safety purpose.

How to Order

Option and Semi-standard Symbol Selection

- · Select one each for a to i.
- · When more than one specification is required, indicate in alphanumeric order.

Example) AW30K-F03BE-1NR-D

- *1 Set the inlet pressure to at least 0.05 MPa higher than the set pressure.
 *2 Options B, G, H, and M are not assembled and supplied loose at the time of shipment.
- *3 The assembly consists of a bracket and set nuts (applicable to the AW20(K)-D to
 - For the AW60(K)-D, the assembly consists of 2 types of the bracket and 2
- *4 The auto drain port is Ø 10 One-touch fitting (③ Pipe thread type: Rc, G) or Ø 3/8" One-touch fitting (3) Pipe thread type: NPT)
- *5 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before
- ending operations for the day is recommended.

 *6 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANR)), air leakage from the drain cock may occur during the start of operations. N.C. type
- *7 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
 *8 When choosing with H (panel mount), the installation space for lead wires will not be secured. In this case, select "wiring bottom entry" for the electrical entry.
- *9 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
 *10 Refer to chemical data on page 129 for chemical resistance of the bowl.
 *11 A bowl guard is provided as standard equipment (polycarbonate).

- *11 A bowl guard is provided as standard equipment (polycarbonate).
 *12 A bowl guard is provided as standard equipment (nylon).
 *13 The combination of float type auto drain C and D is not available.
 *14 Without a valve function. The mounting screws are the same as the thread of ③.
 *15 The combination of metal bowl 2 and 8 is not available.
 *16 For the pipe thread type: NPT. This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)
 Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.
 *17 For options: E1, E2, E3, E4
 This product is for overseas use only according to the New Measurement Act.
 (The SI unit type is provided for use in Japan.)
 *18 ○: For the pipe thread type: NPT only
 *19 △: Select with options: E1, E2, E3, E4.

^{*1} The bowl assembly comes with a bowl seal.

¹ Pressure gauge connection threads are not available for F.R.L. unit with a square embedded type pressure gauge or with a digital pressure switch.

*2 -5 to 50 °C for the products with the digital pressure switch.

*3 For the following conditions in accordance with [Test condition: ISO 8573-4:2001 compliant, Test method ISO 12500-3:2009 compliant]

Conditions: When a new element is used, and the flow capacity, inlet pressure, and the amount of solid bodies on the filter inlet side are stable

*4 The compressed air purity class is indicated based on ISO 8573-1:2010 Compressed air – Part 1: Contaminants and purity classes.

For details on this standard, refer to page 131.

*5 The compressed air quality class on the inlet side is [7:4:4].

[□] in bowl assembly part numbers indicates a pipe thread type (applicable tubing for auto drain).

No indication is necessary for Rc thread; however, indicate N for NPT thread, and F for G thread. (For auto drain, —: O 10, N: O 3/8") Please contact SMC separately for psi and °F unit display specifications.

^{*1} The dimension of C is the length when the filter regulator knob is unlocked.

Filter Regulator/AW20-D to AW60-D Filter Regulator with Backflow Function/ A W20K-D to A W60K-D

Made to Order

Please contact SMC for detailed dimensions, specifications, and lead times.

1 0.4 MPa Setting

The setting specification is 0.4 MPa.

When a pressure gauge is included, the display will show a range from 0 to 0.7 MPa.

Specifications

Made-to-order part no.	-X406
Proof pressure [MPa]	1.5
Max. operating pressure [MPa]	1.0
Set pressure range [MPa]*1	0.05 to 0.4

*1 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.

Applicable Models

Model	AW20(K)-D	AW30(K)-D	AW40(K)-D	AW40(K)-06-D	AW60(K)-D
Port size	1/8, 1/4	1/4, 3/8	1/4, 3/8, 1/2	3/4	3/4, 1

2 Long Bowl

Drain capacity is greater than that of standard models.

Applicable Models/Drain Capacity

Model	AW20(K)-D	AW30(K)-D	AW40(K)-D	AW40(K)-06-D	AW60(K)-D
Port size	1/8, 1/4	1/4, 3/8	1/4, 3/8, 1/2	3/4	3/4, 1
Drain capacity [cm³]	19	43		88	
B dimension [mm]*1	108.1	137.3	167.2	169.2	254.2

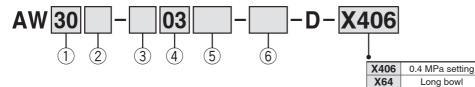

*1 For polycarbonate bowls. Please contact SMC for other bowl materials.

		С		M	Round type pressure gauge (with colour zone)	•	•	•	•	•	•	•	•
			Digital	E1	Output: NPN output, Electrical entry: Wiring bottom entry	•	•	•	•	•	•	•	•
			pressure	E2	Output: NPN output, Electrical entry: Wiring top entry	•	•	•	•	•	•	•	•
			switch*8	E3	Output: PNP output, Electrical entry: Wiring bottom entry	•	•	•	•	•	•	•	•
				E4	Output: PNP output, Electrical entry: Wiring top entry			•					

- *1 Set the inlet pressure to at least 0.05 MPa higher than the set pressure.
 *2 Options B, G, H, and M are not assembled and supplied loose at the time of shipment. The assembly consists of a bracket and set nuts (applicable to the AW20(K)-D to AW40(K)-D). The AR60(K)-D assembly includes 2 types of brackets and 2 mounting screws. *3
- *4 The auto drain port is Ø 10 One-touch fitting (③ Pipe thread type: Rc, G) or Ø 3/8" One-touch fitting (③ Pipe thread type: NPT)
 *5 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *6 If the compressor is small (0.75 kW, discharge flow is less than 100 l/min (ANR)), air leakage from the drain cock may occur during the start of operations. N.C. type is recommended.
- *7 When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.85 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type. 0.7 MPa pressure gauge for 0.4 MPa type (-X406).
- *8 When choosing with H (panel mount), the installation space for lead wires will not be secured. In this case, select "wiring bottom entry" for the electrical entry.

Filter Regulator AW20-D to AW60-D Series Filter Regulator with Backflow Function AW20K-D to AW60K-D Series

- *9 Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification range.
 *10 Refer to chemical data on page 129 for chemical resistance of the bowl.
 *11 A bowl guard is provided as standard equipment (polycarbonate).
 *12 A bowl guard is provided as standard equipment (nylon).
 *13 The combination of float type auto drain C and D is not available.
 *14 Without a valve function. The mounting screws are the same as the thread of ③.
 *15 The combination of metal bowl 2 and 8 is not available.
 *16 For the pine thread type: NPT

- *16 For the pipe thread type: NPT
 This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.) Cannot be used with M: Round type pressure gauge (with colour zone). Available by request for special. The digital pressure switch will be equipped with the unit selection function, setting to psi initially.
- *17 For options: E1, E2, E3, E4
 This product is for overseas use only according to the New Measurement Act. (The SI unit type is provided for use in Japan.)

 *18 O: For the pipe thread type: NPT only

 *19 \(\triangle : \text{Select with options: E1, E2, E3, E4.}\)

Filter Regulator/AW20-D to AW60-D Filter Regulator with Backflow Function/AW20K-D to AW60K-D

Made to Order

Please contact SMC for detailed dimensions, specifications, and lead times.

3 Clean Series

For details, refer to the Clean Series/Low Particle Generation section of the Web Catalogue.

10 - Standard model no.

Clean Series

Without backflow With backflow function function

4 Copper, Fluorine and Silicone-free + Low Particle Generation

For details, refer to the Clean Series/Low Particle Generation section of the Web Catalogue.

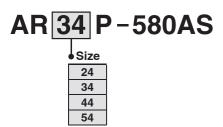

21 - Standard model no.

Copper, Fluorine and Silicone-free + Low Particle Generation

AR-D/AW-D Series Option

Knob Cover

Can be mounted on the knob of a regulator or filter regulator in order to prevent the accidental operation of the knob

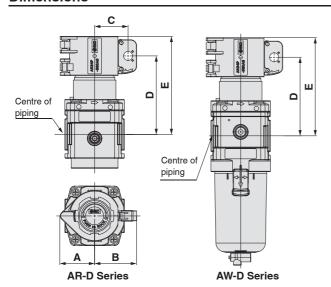

Standard Specifications

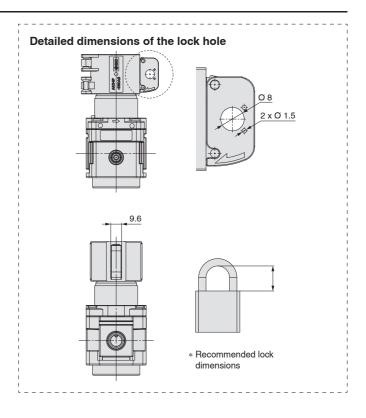

Ambient temperature	-5 to 60 °C
Ambioni tomporataro	0 10 00 0

Dimensions

Part no.	Α	В	С	D	Е	Applicable model
AR24P-580AS	22.5	20.1	24.5	53.1	69.1	AR20-D
AR24F-300AS		32.1	24.5	58.1	74.1	AW20-D

Mounting Precautions

Before mounting the knob cover, confirm that the knob is in the locked state (in which the orange line is not visible). Mount the cover in accordance with the mounting instructions below.

Mount the knob cover on the knob.

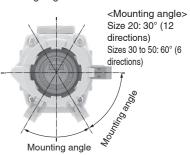

2 Close the lock cover.

Secure with a lock (provided by the customer).

The knob cover can be mounted facing each mounting angle in relation to the knob.

AW(K)-D Series Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For F.R.L. units precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Design / Selection

⚠ Warning

- Residual pressure disposal (outlet pressure removal) is not possible for the AW20-D to AW60-D even though the inlet pressure is exhausted. When the residual pressure disposal is performed, use the filter regulator with backflow function (AW20K-D to AW60K-D).
- The bowl material of the standard filter regulator is polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Chemical resistance of polycarbonate or nylon bowl

			Material	
Type	Chemical name	Application examples	Polycarbonate	Nylon
Acid	Hydrochloric acid Sulfuric acid Phosphoric acid Chromic acid	Acid washing liquid for metals	Δ	×
Alkaline	Sodium hydroxide (Caustic soda) Potash Calcium hydroxide (Slack lime) Ammonia water Sodium carbonate	Degreasing of metals Industrial salts Water-soluble cutting oil	×	0
Inorganic salts	Sodium sulfide Potassium nitrate Sodium sulfate	_	×	Δ
Chlorine solvents	Carbon tetrachloride Chloroform Ethylene chloride Methylene chloride	×	×	Δ
Aromatic series	Benzene Toluene Paint thinner	Coatings Dry cleaning	×	Δ
Ketone	Acetone Methyl ethyl ketone Cyclohexane	Photographic film Dry cleaning Textile industries	×	×
Alcohol	Ethyl alcohol IPA Methyl alcohol	Antifreeze Adhesives	Δ	×
Oil	Gasoline Kerosene	_	×	0
Ester	Phthalic acid dimethyl Phthalic acid diethyl Acetic acid	Synthetic oil Anti-rust additives	×	0
Ether	Methyl ether Ethyl ether	Brake oil additives	×	0
Amino	Methyl amino	Cutting oil Brake oil additives Rubber accelerator	×	×
Others	Thread-lock fluid Seawater Leak tester	_	×	Δ
O: Esse	ntially safe △: Some	effects may occur. X: I	Effects will	occur.

When the above factors are present, or there is some doubt, use a metal bowl for safety.

⚠ Caution

1. When operating at an inlet pressure lower than the inlet pressure used in the flow rate characteristics graph, the pressure drop on the outlet side may be greater. Therefore, be sure to conduct testing using the actual equipment.

For pressure control equipment selection, refer to the "Product Selection Guide."

Maintenance

Marning

 Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

Mounting / Adjustment

Marning

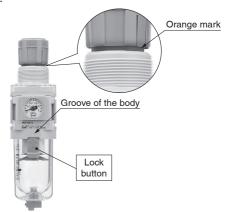

- Set the filter regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator knob excessively can cause damage to the internal parts.
- 2. Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

⚠ Caution

1. Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure.

Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.

- Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).

2. When the bowl is installed on the AW30-D to AW60-D, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

Piping

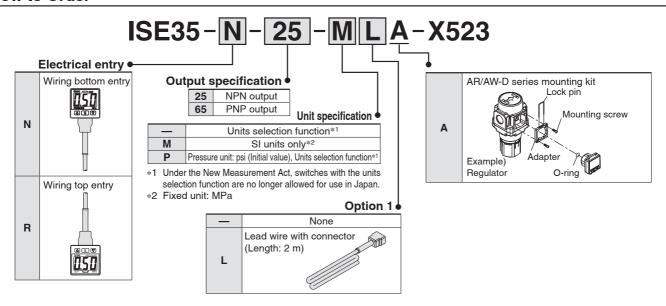

∧ Warning

1. To screw the pressure gauge and piping materials into the pressure gauge port on the product, tighten to the recommended torque (3 to 5 N·m) while securely holding the AW(K)-D in place. Additionally, when mounting a One-touch fitting to the pressure gauge port, refer to the Fittings and Tubing Precautions.

International Standard ISO 8573-1:2010 Compressed Air Purity Classes

Compressed air is used in a variety of manufacturing processes. In this age, compressed air with a high degree of purity is becoming increasingly necessary.

For this reason, it is necessary to remove contaminants from systems which supply compressed air and to secure the quality. The standard which stipulates the class according to the quantities of contaminants in compressed air is ISO 8573-1.

[Outline]

Stipulates the purity class of contaminants (particles, water, oil) mixed in with the compressed air

[Scope]

Can be used in various places in compressed air systems

[Terms and Definitions]

- Purity class: An index assigned for each classification obtained by dividing the concentration of each contaminant into ranges
- · Particle: Small discrete mass of solid or liquid matter
- · Humidity and liquid water: Water vapor (gas), Water droplets
- · Oil: Liquid oil, Oil mist, Vapor

[Purity Classes]

	Particles			Humidity and liquid water		Oil	
Class	Maximum number of particles per cubic meter as a function of particle size d [μm]		Mass concentration Cp	Pressure dew point	Concentration of liquid water Cw	Concentration of total oil	
	0.1 < d ≤ 0.5	0.5 < d ≤ 1.0	1.0 < d ≤ 5.0	[mg/m ³]	[°C]	[g/m ³]	[mg/m ³]
0		As specified by the equipment user or supplier and more stringent than class 1					
1	≤ 20000	≤ 400	≤ 10	_	≤ -70	_	≤ 0.01
2	≤ 400000	≤ 6000	≤ 100	_	≤ -40	_	≤ 0.1
3		≤ 90000	≤ 1000	_	≤ –20	_	≤ 1
4	_	_	≤ 10000	_	≤ +3	_	≤ 5
5	_	_	≤ 100000	_	≤ +7	_	_
6	_	_	_	0 < Cp ≤ 5	≤ +10	_	_
7	_	_	_	5 < Cp ≤ 10	_	Cw ≤ 0.5	_
8	_	_	_	_	_	0.5 < Cw ≤ 5	_
9	_	_	_	_	_	5 < Cw ≤ 10	_
х	_	_	_	Cp > 10	_	Cw > 10	> 5

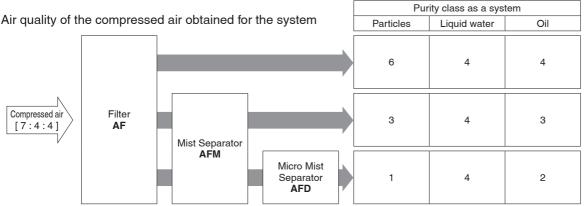

[How to Perform a Test to Check the Performance]

ISO 12500, which sets out the test method to be used in order to check the filter performance for each of the three kinds of contaminants, is indicated below.

- · Particle: ISO 12500-3:2009
- · Liquid water: ISO 12500-4:2009
- · Oil: ISO 12500-1:2007
- * Measured using a dedicated evaluation system which has been certified according to ISO 12500-□ and also by a third party (Certified)

[Purity Class Designation Example]

The class indicates the compressed air purity according to ISO 8573-1:2010 (JIS B 8392-1:2012) and indicates the maximum purity class which can be obtained using that system. Note, however, that this value will differ according to the inlet air conditions.

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) ¹⁾, and other safety regulations.

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate

injury.

Warning indicates a hazard with a medium level of risk★ Warning: which, if not avoided, could result in death or serious

njury.

Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious

njury.

ISO 4414: Pneumatic fluid power – General rules relating to systems.
 ISO 4413: Hydraulic fluid power – General rules relating to systems.
 IEC 60204-1: Safety of machinery – Electrical equipment of machines.
 (Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots - Safety. etc.

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
 - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions
 - Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
 - 3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
 - 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

⚠ Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first. ²⁾ Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

⚠ Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country.

Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Revision History Edition B - Attachments have been added. YV - Number of pages has been increased from 72 to 104. **Edition C** - Sizes 40-06, 50, and 60 have been added to the AC ZQ - Sizes 40-06, 50, and 60 have been added to the AF, AR(K), and AL - The VHS40-06 and 50 have been added. - Size 40-06 has been added to the AFM/AFD. Sizes 40-06 and 60 have been added to the AW(K). Made to order options have been added. - Number of pages has been increased from 104 to 112. **Edition D** - A right angle square type pressure gauge has been added.
